EREN KAÇAR

Software Engineer

erenkacr@gmail.com | LinkedIn | GitHub | erenkacar.com

Summary

Computer Engineering graduate with hands-on experience developing desktop and full-stack applications using React, Electron, Go, and Python. Experienced in real-time systems, frontend development, backend APIs, inter-process communication, and desktop application packaging. Focused on building reliable, performant, and user-friendly software.

Experience

Trakya University Edirne, Türkiye

Software Developer - Onsite Mar. 2025 – Jun. 2026

- Developed and maintained administrative workflows using the Bimser Synergy low-code platform to improve Student Affairs operations.
- Supported the migration and integration of a new Student Information System across multiple faculties.
- Resolved data and system issues affecting 1,000+ students during the transition.

Education

Trakya University, B.Sc. in Computer Engineering, 2022 – 2026

Projects

GuitarSense – Real-Time Guitar Practice & Amp Platform

Technologies: Electron, React, TypeScript, Python, ZeroMQ, PortAudio, WASAPI, ASIO

• Selected for support under TÜBİTAK 2209-A, Türkiye's national undergraduate research funding program.

• Designed and developed a desktop guitar application integrating real-time audio processing, configurable guitar effects, and interactive practice tools.

• Integrated an Electron/React interface with a Python audio engine; measured backend-reported latency of approximately 6 ms (ASIO) and 46 ms (WASAPI), and packaged a Windows beta.

Nexora – Full-Stack Social Media Platform

• Built a full-stack social platform with authentication, two-factor verification, password recovery, profiles, posts, follows, likes, reels, and content discovery.

• Developed REST APIs with Go, Gin, and GORM; integrated Firebase-based real-time messaging and responsive React interfaces.

• Integrated Gemini-powered content analysis to support content categorization and discovery.

Grade Watcher – Personal Grade Notification Tool

• Built a Python and Playwright automation tool that checks grade updates through an authenticated student portal session and sends Telegram notifications when changes are detected.

• Implemented session persistence, redirect handling, scheduled polling, and resilient error recovery for unattended monitoring.

Skills

- **Programming Languages:** TypeScript, JavaScript, Go, Python, C++, C#
- **Frontend & Desktop:** React, Next.js, HTML, CSS
- **Backend & Data:** REST APIs, Gin, GORM, MySQL, Firebase
- **Desktop & Systems:** Electron, Unity, Linux, ZeroMQ
- **Audio & Tools:** PortAudio, ASIO, WASAPI, Git, GitHub
